RAINSCREEN SYSTEMS

**CUSTOMIZED CLADDING WITH
BUILT-IN RAINSCREEN**

SUMMIT CLADDING AND RAINSCREEN SYSTEMS

Summit Cladding systems combine custom milling and finishing with a built-in, innovative rainscreen system to offer you exterior cladding that looks and performs exactly the way you prefer.

With three product lines available, including six species of wood, 13 finish options, and built-in rainscreening, Summit by Russin protects your home from moisture, mold and rot while providing a perfect match to any aesthetic.

◀ BUILT-IN RAINSCREENING

Protecting your home from trapped moisture is a critical, often overlooked step. Our custom Summit profile includes built-in rainscreening clips that provide a 3/4" gap, creating an air barrier that allows moisture to escape and prevents rot and mold.

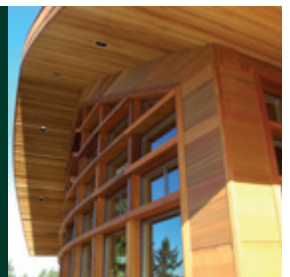

CREATED IN-HOUSE

All Summit systems are milled and finished in-house, for maximum control over each order. Our custom profile can be milled into six different species of wood and our factory finishing facility provides expert, consistent finishes that protect every inch of the boards.

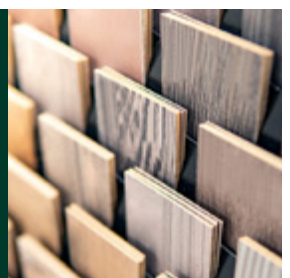

CLEAN, MODERN PROFILE

This custom profile, created by cladding experts with decades of experience, is a streamlined, clean profile with a two degree bevel that repels moisture and 1/8" shadow gap with tongue and groove interlocking on all sides - an unmistakably modern look.

CUSTOMIZE TO INFINITY

We offer three unique ranges within Summit to satisfy the needs of most customers, but if you've been dreaming of a specific combination of wood and finish and don't see it listed, contact us! We have nearly endless customization options.

CASCADE RANGE

The Cascade Range of cladding includes our most high-performing wood species, offering exceptional rot resistance and stability independent of the finish. Finishing options include a variety of Cutek Extreme colourtones, a penetrating oil that provides industry-leading protection and staining for natural wood products. The Cascade Range provides combinations designed to maximize the lifespan of your cladding.

TETON RANGE

The Teton Range of cladding is perfect for those who want a durable, long-lasting cladding option at a reasonable price. The Teton Range includes neutral black or white color options from Benjamin Moore, and a variety of high-performance wood species and products to mix and match as you choose. These sophisticated colors and long-lasting boards, combined with our innovative built-in rainscreen clips, offer the perfect cladding option to prioritize performance.

APPALACHIAN RANGE

The Appalachian Range of cladding is an ideal option for anyone looking for an affordable cladding system that achieves the perfect look while offering reliable, simple rainscreening. This range features naturally durable Western Red Cedar, Eastern White Pine, and Malaysian hardwood, and finishing options from Benjamin Moore and Randolph. The Appalachian Range provides reliable moisture protection and customizable colors at a budget-friendly price for long-lasting cladding, customized to your preferences.
