

DECK SYSTEMS

ELEVATE YOUR OUTDOORS

a history of innovation

SINCE THE FIRST PROTOTYPE WAS DESIGNED in 2009, Mbrico Tile Decks has redefined passion, innovation, and engineering in the decking industry. Our experience in construction and home building led us to create a luxurious yet simplistic groutless tile deck system that integrates beautifully into any design.

As the industry's first comprehensive and ready-to-install decking that's not matched by any other product on the market, our superior system features a better design with easier installation, lower maintenance, and more color options than other conventional decking solutions.

Mbrico works in perfect harmony with all of the industry's popular railing solutions, adaptable to surface or fascia-mounted railings with tile waterfall edges, composite picture frame borders, or flush fascia boards.

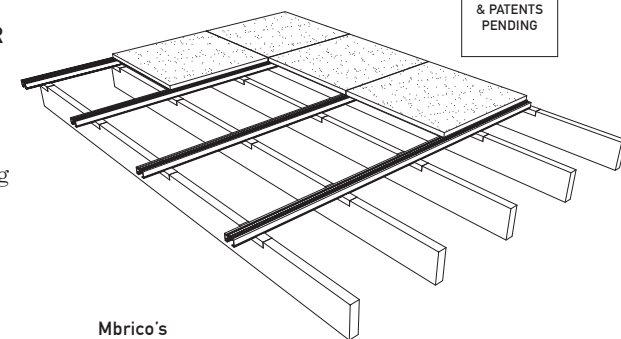

proprietary & revolutionary system

THE MBRICO TRACK SYSTEM AND BACKER

is a turnkey solution for upgrading traditional elevated decks. It's easily installed by any skilled carpentry crew that is building a new deck or resurfacing existing framing.

Mbrico Tile Decks utilize a tongue and groove track system that is completely self-spacing and free draining. Designed with the installer in mind, our track system is laid over the top of standard treated lumber, steel, or aluminum joists. It provides a straight line, self-leveling extrusion that guarantees perfect spacing and flawless installation every time.

The secret to the Mbrico system's success lies in the tile backer. Designed to work seamlessly with our entire system, we use a proprietary bonding process on our porcelain tiles so that they are a perfect fit with our aluminum tracks. Typically, unbacked 2cm tiles cannot be installed on an elevated surface due to safety

Mbrico's revolutionary track system applies to standard deck framing

concerns. Our revolutionary backer pushes the envelope with a better design, rigorous testing, and a safer product for our customers.

To get started, all you need are our beautiful porcelain tiles, aluminum tracks, deck screws, butyl tape, and traditional code deck framing. It's simple, yet impactful.

designed for life

A COMBINATION OF AMERICAN CRAFTSMANSHIP, high-quality Italian stoneware, and ground-breaking technology provide a myriad of advantages to create the most durable indoor/outdoor surfaces.

ANTI-SLIP - Mbrico Tile Deck surfaces are ADA-compliant, skid-resistant, and textured to prevent slipping, even when wet.

EASY INSTALLATION - Ready to install, each component is precision cut for accurate coupling of slabs. Our grout-free and self-spacing system makes installation remarkably easy for skilled carpentry crews using mechanical fasteners and standard tools. No painting, staining or sealing is required— ever.

WEIGHT LOADS - Each porcelain slab can bear a load of up to 5,300 lbs, making Mbrico Tile Decks one of the strongest decking options on the market. Other materials like grouted stone, concrete, or wood may crack under heavy loads, causing unsafe conditions and becoming a liability.

DURABILITY - Our porcelain tiles won't rot, mold, warp, stain, crack, splinter, crumble or fade. They're also resistant to expansion and contraction issues, gapping, and movement.

FROST PROOF - Tested by Tile Council of North America for 60 years worth of freeze/thaw cycling with no visible change. Installed from Northern British Columbia to Barbados.

INTERIOR AND EXTERIOR APPLICATION - Our beautiful tile can become the heart of your home or business as the high-quality Italian stoneware seamlessly flows between interior and exterior spaces.

AFFORDABLE - No more expensive outsourcing, importing from overseas, or extended lead times. This is the most cost-effective tile decking surface the industry has ever seen.

SUSTAINABLE - Built to meet LEED standards, our tile is made without harmful chemicals, varnishes, and resins and is designed to last a lifetime reinforcing our commitment to sustainability.

DESIGNED TO THE DETAIL - Whether you have detailed architectural plans or a concept on a napkin, our talented design team elevates each project to unique levels of luxury and longevity.

WARRANTY - Residential and commercial customers enjoy a limited lifetime warranty.

“When I found Mbrico, I knew we had something of a completely different caliber here that would solve the concerns I have had with other outdoor installations.”

- Mike Byron, MCNE CRS
Managing Broker, John L. Scott Real Estate

RESISTANCE - Each of our materials is resistant to mold, stains, frost, flames, chemicals, extreme temperatures and more.

LONGEVITY - Mbrico tile decks are designed to last. Our products are exposed to harsh elements every day and still have a lifespan of over 30 years.
