

TRANQUILITY

paneling by Russin

WHAT IS TRANQUILITY PANELING?

Tranquility Paneling is made from American-harvested Ponderosa Pine, much of it salvaged after wildfires. Wildfires in the Western United States can make surviving trees more susceptible to beetle infestation – these beetles carry a fungus that causes some of the fiber in the wood to turn blue, and it's important to harvest this fiber so our forests can naturally regrow.

While the blue stain imparts a beautiful characteristic to the wood, it doesn't impact the longevity or performance of the resulting fiber. The wood is kiln dried, ensuring no beetles or larvae survive production. Tranquility Paneling is completely natural, nontoxic, and uniquely beautiful.

Available in 1x6 T&G WP-4 and in stock for prompt shipment!
